

Postdoctoral position in Plant Epigenetics

We are looking for two postdoctoral researchers to study the molecular bases of epigenetic gene silencing as part of a project funded by the European Research Council (ERC).

The successful applicants will join a young research group and research projects aimed at getting a better understanding of the molecular mechanisms governing DNA methylation patterns and at deciphering how stress impacts on silencing phenomena.

Positions are open to highly motivated individuals with a strong background in molecular biology and genetics and good record of scientific productivity. Previous experience with Arabidopsis research is a plus. Candidates with a strong interest in epigenetics are especially encouraged to apply. Skills and interest in bioinformatics are desired but not essential. The positions should ideally start in April/May 2012 and October 2012, respectively.

Applicants should send their CV, a description of their research experience and interest, and the names and addresses of 2-3 references by e-mail to:
olivier.mathieu@univ-bpclermont.fr
