

Postdoctoral position in plant molecular biology, Gregor Mendel Institute, Vienna, Austria

A postdoctoral position is available in the area of plant molecular biology and genetics in the group of Dr. Karel Riha.

The successful applicant will undertake a project aiming at deciphering molecular mechanisms that regulate meiosis and meiotic progression in plants (for reference see: PLoS Genetics 2013, 9(5): e1003508, Plant Cell 2010, 22:3791-3803). The project involves genetic and genomic approaches, biochemistry and cell biology techniques to identify and characterize novel factors involved in meiotic progression and plant reproduction. Experience in plant molecular biology/biochemistry and/or NGS data analysis is welcome, but not essential.

Further inquiries should be addressed to Dr. Karel Riha (karel.riha@gmi.oeaw.ac.at). The application should include CV, a brief letter of motivation, and contact information for at least two referees.
